JCSS 0081

is a logo mark for an accreditation system based on Japanese Measurement Law. Our Planning & Engineering Division is accredited in accordance with ISO/IEC Guide 25: 1990 in the field of photometry calibration.

(Our accreditation number is 0081.)
[JCSS: Japan Calibration Service System (The Japanese Government accreditation scheme for calibration laboratories and a signatory of APLAC Mutual Recognition Arrangement)]

FEATURES

■High Stability

Stability is one of the important characteristics of calibrated light sources. Hamamatsu's excellent cathode technology and optimized lamp housing realize high stability and good repeatability.

●Light Intensity Drift (Typ.)

■High Power

A Xenon lamp emits high intense UV, visible and IR light so that a reliable measurement can be possible even in the range of 300 nm to 400 nm, where either a deuterium lamp or a tungsten lamp doesn't deliver enough light.

●Comparison of Spectral Irradiance (Reference data) : 50 cm away from light source
